What type of solar system suited for your home or commercial space?

There are three types of solar energy systems

ON-Grid solar system: An ON grid solar system is a system that works along with the grid. This means that any excess or deficiency of power can be fed to the grid through net metering.

OFF-Grid solar system: A solar system which has battery storage and a backup is called an off grid solar system that generates electricity after power cut or during the night hours.

Hybrid solar system: The hybrid solar system is connected to the grid via net metering and also has a battery backup to store the power
